INTRODUCTION

Antaira Technologies' AGS-7230-AC-T-US is an industrial wireless gateway that is loaded with luxuriant security features including VPN, firewall, NAT, port forwarding, DHCP server, and many other powerful features for outdoor IP surveillance applications. The redundancy design is in the fallback 12~48VDC power terminal.

With built-in 802.11ac/n compliant single band or dual-band WiFi module, you just need to find out an available wireless network (or Access Point), and the WiFi VPN Gateway can simply connect to the wireless network and connect your filed devices to the local management center. By VPN tunneling technology, remote sites easily become a part of the Intranet, and all data are transmitted in a secure (256-bit AES encryption) link. The feature of DI/DO allows the gateway to have real-time response whenever events are detected by sensors.
For wireless M2M (Machine-to-Machine) applications, the AGS-7230-AC-T-US is absolutely the right choice.
